

**Level-4, Medona Tower, 28 Bir Uttam AK Khandakar Rd, Dhaka 1212**

## PROJECT DETAILS

Project Name	N8N   tech_reaper    smophy   FO4225DA3CF86   \$230
Deadline	Mar 5, 3:32 PM
Work Progress (% Done)	
Assign to	
Assigned by	
Project Form	@Auranestwebflow (@AuraNest Webflow C-01)

## Project Instructions

	<p>Hello!</p> <p>I am looking for someone who could help me create a workflow in n8n that would:</p> <ul style="list-style-type: none"> <li>- check the latest posts on various forums such as Facebook, Reddit, etc. on a topic that interests us on an ongoing basis (e.g., every 15 minutes)</li> <li>- then, via a connected AI, the bot could automatically respond to them.</li> </ul> <p>Is this possible to build?</p>

Files/Links (if Any)	
Template	
Scope of Work	<p>Thanks for clarifying. You're right, fully automated replies on R-e-ddit or other platforms can get flagged quickly, so this revised approach is much safer and smarter.</p> <p>Here's what I propose for your simplified agent:</p> <ul style="list-style-type: none"> <li>- Monitor R-e-ddit every 5-10 minutes for new posts matching your keywords</li> <li>- Capture the post title, content, subreddit, author, and link</li> <li>- Save all matches automatically into a G-o-o-gle Sheet</li> <li>- Send you an e-mail notification whenever a new relevant post is found</li> <li>- Include safeguards to avoid duplicates or missed entries</li> </ul> <p>Cost: \$230 USD          Timeline: 15 working days after your confirmation</p>
